

REPORT FOR ASSIGNMENT WEEK 6

Name: Nguyen Hoang Gia Han
ID: 23125055

Content: Tasks that I have completed in the group project this week.

This week, our team has discussed and written some changes to source code. Today, on Wednesday, our team has a meeting and we modify a lot of functions in the program. My task is to declare, define and write functions for NodeStudent and Nodecourse to implement the linked list for list of students and courses. I also wrote the function to view list of courses and update information in course according to the request of user. My program has a dynamic array StudentQuery which stores all students available in all classes. At the beginning, the program will import list of classes, and there will be a list of students in every class. So I wrote a function to transfer students' information from the list of classes to StudentQuery for running the program. Lastly, I wrote two functions for the staff to add the students to a course and remove them from course.
