

REPORT FOR ASSIGNMENT WEEK 5

Name: Nguyen Hoang Gia Han

ID: 23125055

Content: Tasks that I have completed in the group project this week.

This week, my group has been discussing the flow of this project.

1. What's your task?

- My task is to create a repository on Github, create structures Student.h and Staff.h, and determine the naming conventions for the variables in the program, and assign group members tasks to write those functions.

2. Short description about the tasks:

- More detailed, in Student.h, I declare those functions: login, change password and view profile. I did the same in Staff.h. When my friends push to Github from their computers, I resolve the conflicts, sometimes make some small modifications, and fix some bugs. We started on 8/3/2024, and I have just finished those tasks on 11/3/2024. Now we are planning to further develop and complete the program and add some new features. Everyday, I spend approximate 2 hours on this project. That's the end of my report!

3. Screen shoot on the Github:
